

Title: One time use disposable styptic product (referred to as "Stypti-Stik" in Disclosure Document #481876).

Field of Invention: This invention greatly improves the use of styptic solution by creating an one time use disposable application of styptic solution.

Object: The objective of the one time use disposable styptic product is to remedy the multiple-use by multiple users problem. We claim an one timely wrapped or package of one time, one-time use disposable styptic applicators be the solution.

Advantages: A novelty of the one time use disposable styptic product allows the user to apply a small amount of styptic solution to stop bleeding. A second novelty to our invention is that with a small amount of styptic solution it may be disposed of and another selected when another application is needed without significant loss of product.

Description of Drawings: In drawing one (1) the styptic is found on one end of an elongated stem material. In drawing two (2) the styptic solution is found at both ends of an elongated stem material. The stem length can vary for various uses. The elongated stem of either may be manufactured out of several different man made or natural materials to function as the applicator for this product.

Conclusion: Accordingly the reader will see that the one time use disposable styptic solution applicator permits cost effective use of styptic in the professional or personal use areas. It also provides protection from the risk of the spread of blood-borne diseases. Further objects and advantages of our invention will become apparent from a consideration of the included drawing and description.
